                                                                                                                           AAR75178 is a partial peptide corresponding to bovine kininogen fragment 1.2, amino acids 387-496. Partial peptides of bovine and human kininogen fragments 1.2, 1 and 2, are used in wound treating agent compons. and act as the active component. The fragments are useful in wound treating because they have growth promotion activity
                                                                                              Sequence
                                                                                                                                                                                            Claim 4;
                                                                                                                                                                                                                A wound treating agent contg. a partial peptide of kininogen have growth promotion activity of fibroblasts.
                                                                                                                                                                                                                                                WPI; 1995-158909/21.

C;Comment: The glycine/histidine/lysine-rich region of HMW kininogen light chain is i
C;Comment: Bradykinin, released from kininogen by kallikrein, is a potent vasodilator xyproline residue is present in the kininogen prior to the release of bradykinin.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    kininogen, HMW II precursor - bovine

Kininogen, HMW II precursor - bovine

Kilternate names: alpha-2-thiol proteinase inhibitor; preprokininogen

N;Contains: bradykinin (kallidin); kininogen I; kininogen II; prokininogen

C;Species: Bos primigenius taurus (cattle)

C;Date: 14-Nov-1983 #sequence_revision 14-Nov-1983 #text_change 22-Jun-1999

C;Accession: A01282; A91923; A91941; A91938; B29559

11. FUNCTION: (1) KININOGENS ARE INHIBITORS OF THIOL PROTEASES; (2).

11. FUNCTION: (1) KININOGENS ARE INHIBITORS OF THIOL PROTEASES; (2).

12. HAMP-KININOGEN PLAYS AN IMPORTANT ROLE IN BLOOD COAGULATION BY HELPING TO POSITION OPTIMALLY PREKALLIKREIN AND FACTOR XI NEXT TO FACTOR XII; (3) HAMP-KININOGEN INHIBITS THE THROMBIN-AND PLASMIN-INUGED AGGREGATION OF THROMBOCYTES; (4) THE ACTIVE PEPTIDE BRADYKININ THAT IS RELEASED FROM HAMP-KININOGEN SHOWS A VARIETY OF PHYSIOLOGICAL EFFECTS: (4A) INFLUENCE IN SMOOTH MUSCLE CONTRACTION, (4B) INDUCTION OF HYPOTENSION, (4C) NATRIURESIS AND DIURESIS, (4D) DECREASE IN BLOOD GLUCOSE LEVEL, (4E) IT IS A MEDIATOR OF INFLAMMATION AND CAUSES (4E1) INCREASE IN VASCULAR PERMEABILITY, (4E2) STIMULATION OF NOCICEPTORS (4E3) RELEASE OF OTHER MEDIATORS OF INFLAMMATION (E.G. PROSTRALANDINS), (4F) IT HAS A CARDIOPROTECTIVE EFFECT (DIRECTLY VIA BRADYKININ ACTION); (5) LAMP-KININOGEN IN HIBBITS THE AGGREGATION OF THROMBOCYTES; (6) LAMP-KININOGEN IS IN CONTRAST TO HAMP-KININOGEN NOT INVOLVED IN BLOOD
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            This SWISS-PROT entry is copyright. HELPING TO POSITION OPTIMALLY PREKALLIKESIN AND FACTOR XI NEXT
TO FACTOR XII; (3) HMW-KININOGEN INHIBITS THE THROMBIN- AND
PLASMIN-INDUCED AGGREGATION OF THROMBOCYTES; (4) THE ACTIVE
PEPTIDE BRADYKININ THAT IS RELEASED FROM HMW-KININOGEN SHOWS
A VARIETY OF PHYSIOLOGICAL EFFECTS: (4A) INFLUENCE IN SMOOTH
MUSCLE CONTRACTION, (4B) INDUCTION OF HYPOTENSION, (4C)
NATRIURESIS AND DIURESIS, (4D) DECREASE IN BLOOD GLUCOSE LEVEL,
(4E) IT IS A MEDIATOR OF INFLAMMATION AND CAUSES (4E1) INCREASE
IN VASCULAR PERMEABILITY, (4E2) STIMULATION OF NOCICEPTORS (4E3)
RELEASE OF OTHER MEDIATORS OF INFLAMMATION (E.G. PROSTAGLANDINS),
(4F) IT HAS A CARDIOPROTECTIVE EFFECT (DIRECTLY VIA BRADYKININ
ACTION, INDIRECTLY VIA ENDOTHELIUM-DERIVED RELAXING FACTOR
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Han Y.N., Komiya M., Iwanaga S., Suzuki T.;
"Studies on the primary structure of bovine high-molecular-weight
kininogen. Amino acid sequence of a fragment ('histidine-rich
peptide') released by plasma kallikrein.";
J. Biochem. 77:55-68(1975).
-i- FUNCTION: (1) KININOGENS ARE INHIBITORS OF THIOL PROTEASES; (2)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             bonds
